### DETAILED ACTION

1. Claims 1-28 are presented for examination.
2. The examiner requests, in response to this Office action, any reference(s) known to qualify as prior art under 35 U.S.C. sections 102 or 103 with respect to the instant claims. That is, any prior art similar to the instant claimed invention that could reasonably be used in a 102/103 rejection. This request does not require applicant to perform a search. This request is not intended to interfere with or go beyond that required under 37 C.F.R. 1.56 or 1.105. This request may be fulfilled simply by asking the attorney(s) of record handling prosecution and the inventor(s)/assignee for references qualifying as prior art. A simple statement that the query has been made and no prior art found is sufficient to fulfill the request. Otherwise, along with a 102/103 submission a discussion of why the reference(s) qualifies as prior art with respect to the instant claims is requested. **A response to this inquiry is greatly appreciated.**

The examiner also requests, in response to this Office action, support be shown for language added to the claims on amendment. That is, indicate support for newly added claim language by specifically pointing to page(s) and line no(s). in the specification and/or drawing figure(s). This will assist the examiner in prosecuting the application.

3. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. § 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-28 are rejected under 35 U.S.C. § 102(b) as being anticipated by Shiell et al. (Pat. No. 6,119,222).

Shiell teaches the claimed step of "receiving a request for an instruction" as the request generated by fetch unit 26 shown in figure 1. The claimed step of "searching a cache system at a first level of the instruction" corresponds to searching level 1 instruction cache 16. The claimed step of "searching...a second level...in parallel with the first level...based on a prediction" corresponds to prefetching an instruction from the second level 2 cache 11 simultaneously with the fetch of the instruction from level 1 cache as discussed at column 6, lines 45-48. The prefetched information from the second level cache corresponds to **expected** cache misses (col. 6, line 51). The examiner contends an expected cache miss is a predicted cache miss. Information on bus UPD from grad queue and tag ck 27 includes information (e.g. addresses) for instruction that

involve serious cache misses (col. 7, lines 2-6). The claimed "parameter value" corresponds to the values in prefetch counters T0 CTR, T1 CTR, N0 CTR and N1 CTR (col. 13, lines 12-16). If the counters are zero (zero is the predetermined threshold) the prefetch to second level cache 2 (or above) is ignored as the sought-for contents are most likely already in lower level cache (i.e. level 1 instruction cache 16). If the counters are above zero the prefetch of second level cache 11 is permitted.

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 2-13, 15-19, 21-23, 25, 27 and 28 are rejected under 35 U.S.C. § 103(a) as being unpatentable over Shiell et al. (Pat. No. 6,119,222).

The examiner believes most, if-not-all, claim features are taught by Shiell et al. However, in the event a claim feature(s) is not inherent applicant should consider the claim feature(s) in light of the Official notification put forth below.

Official notice is taken of the prior art teaching any claim feature not specifically discussed above. That is, any prior art (including that of record) teaching the more well known claim features commonly found in the dependent claims. The claim features, while part of the invention, appear to be well known and their relevance not essential to the main invention found in the independent claim(s). Thus, a detailed discussion of the well known claim features is not warranted at this time. It would have been obvious to one having ordinary skill in the art at the time of the invention to combine Shiell with the officially taken prior art given the state of the art at the time the well known claim features were invented.
